

DE GRUYTER

GRADUATE

Separation processes on an industrial scale account for well over half of the capital and operating costs in the chemical industry. Knowledge of these processes is key for every student of chemical or process engineering. This book is ideally suited to university teaching, thanks to its wealth of exercises and solutions. The second edition boasts an even greater number of applied examples and case studies as well as references for further reading.

- ▶ An authoritative introduction to industrial separation technology.
- ▶ Contains exercises at the end of each subject as well as solutions.
- ▶ Now with extended and updated examples and case studies.

André B. de Haan
is principal technologist at Cosun Innovation Centre and professor at TU Delft. He has worked at DSM and Corbion-Purac and held chairs at University of Twente and TU Eindhoven.

Boelo Schuur
is professor Separation Technology in the Sustainable Process Technology group at the University of Twente with a main focus on affinity fluid separations, and applications in biorefineries and circular economy.

H. Burak Eral
is the principle investigator and independent group leader at Process and Energy department in TU Delft. His research focusses on out-of-equilibrium manufacturing/separation processes.
